New Version of MapX Mobile

MapInfo Corporation (NY, USA) has announced the latest release of MapInfo MapX Mobile, its premier mapping application for Microsoft Windows Pocket PC software developers. With new functionality and support for the latest handheld devices and standard development languages, MapX Mobile v5.0 software enables an organisation to receive, view and analyse data wherever critical decisions are made-in the field and across the enterprise.

The MapInfo MapX Mobile v5.0 software can be customised via standard development languages such as Embedded C++ and Microsoft .NET. Data created using MapX Mobile v5.0 software can be displayed with the MapXtreme 2004 application, the MapInfo location-based development environment built on Microsoft .NET. MapX Mobile v5.0 software provides an unprecedented level of new capabilities, including support for Enhanced Compressed Wavelet (ECW) imagery format, thematic mapping, object creation and processing.

MapInfo MapX Mobile v5.0 is available immediately. A free Software Developer
Kit (SDK) is available from www.mapxmobile.com.
