

# Nikon-Trimble Launches New Reflectorless and Prism-only Total Station

Nikon-Trimble has introduced a new version of the Nikon NPL-322+ total station, now available in both reflectorless and prism-only versions.

The NPL322+ is developed to deliver an economic, versatile, and easy-to-use platform. Nikon's legendary optics effectively allow in more light to give brighter and clearer images. Even in the low-visibility conditions typical in the field. The NPL 322+ allows users to see more detail and much less distortion, especially over longer distances. Using the same rechargeable long life Li-ion battery as the Nivo series, combined with low power consumption design, the NPL-322+ is designed to provide the longest possible time in the field. For convenience, the Nikon NPL-322+ total stations include two batteries and a dual charger, to support even the longest of working days.

Located in Japan, Nikon-Trimble is a joint venture between Nikon Corporation and Trimble to address the global surveying and construction markets. Trimble and its subsidiaries are the exclusive distributors of Nikon survey and construction products.
