

Oblique Aerial Imaging Services Expanded

Pictometry International Corp. (NY, USA) has signed a technology agreement with its licensee, AAMHatch (Australia) which will expand the coverage area for Pictometry's patented image capture process into 12 countries.

Under the agreement, AAMHatch has expanded its prior exclusive rights to utilise Pictometry's image capture and processing technology and market image libraries and software in South Africa, Singapore, Malaysia, Thailand, Indonesia, Fiji, Papua New Guinea, East Timor, Brunei, Vietnam, Laos, and Cambodia.

AAMHatch is one of Pictometry's four select international technology licensees. The company became a Pictometry licensee in 2005 and has since captured oblique imagery covering populated regions within Australia and New Zealand.
