

# Orbit GT and 3D Laser Mapping Sign Reseller Agreement

Orbit GeoSpatial Technologies has announced that 3D Laser Mapping has been appointed as reseller of Orbit GT mobile mapping software products. The agreement was signed during the combined SPAR Europe and European Lidar Mapping Forum conference in Amsterdam, The Netherlands.

Peter Bonne, vice president business development of Orbit GT stated he is very happy to have signed a reseller agreement with 3D Laser Mapping, a leading provider of mobile mapping solutions worldwide. Their excellent reputation, worldwide presence and state of the art solutions, makes 3D Laser Mapping a natural partner to Orbit GT in a growing mobile mapping business. Bonne said he is convinced that together both companies are building a strong partnership that will offer the best solutions for customers.

Dr Graham Hunter, founder and chairman of 3D Laser Mapping, added the training and support they provide to their user base is fundamental to the successful deployment of their mobile mapping systems around the world. Being able to offer a suite of advanced software solutions that facilitate the use of mobile mapping data across an organisation is crucial for the continued growth of mobile mapping applications.
