

Orbit GT and Solv3D Sign Reseller Agreement

Orbit GeoSpatial Technologies, the Belgian leader in solutions for exploiting mobile and aerial mapping data, has announced that Solve3D, Canada, has been appointed as reseller of Orbit GT mobile mapping software products. Solve3D is a reseller of advanced terrestrial, mobile and airborne software mapping and GIS solutions to the resource, transportation and infrastructure sectors.

Johan Bonne, CEO of Orbit GT, commented that Solv3D's specialisation in panorama, point cloud and 3D modelling activities makes it a natural partner in a growing mobile mapping business. He is convinced that together they are building a strong partnership that will offer the best solutions for customers.

Solv3D firmly believes it has found the affordable, sustainable GIS solution software. With the increase in mobile mapping in the resource, utility and transportation sectors, coupled with the strength of Orbit GT, owners will now have the tools to unleash the potential of 3D mobile mapping data in their asset lifecycle management, stated Jeremy Rakai of Solv3D. The mobile mapping market is just starting to unfold in Canada, and Orbit GT provides the platform to exploit the rich datasets, he continued.
