

PCI Geomatics Supporting Esri

PCI Geomatics, Canada, has been working closely with Esri to make imagery more accessible to a broader user community. PCI's Geolmaging Accelerator (GXL) technology is currently being used to support the processing of GeoEye data into ortho-corrected and colour balanced image products that will be made available for free through ArcGIS Online.

PCI's automated GXL Satellite image production system will be used to process high-resolution GeoEye imagery. In addition to the GXL processing capacity, PCI will also lend its geo imaging technical expertise to the project. The goal of the project is to process imagery and generate accurate imagery content, mosaics and associated metadata for ArcGIS Online.
