

# Penmap at Esri UC

Penmap is represented on booth #1610 at the Esri International User Conference, taking place from 23 to 27 July 2012 in San Diego, USA. "Sharing" is the main focus this year, besides new complete data collection solutions like the FLINT S-series high-accuracy GNSS handheld receiver.

With the new Penmap Cloud service, the company aims to bring data exchange between field and office and the whole data processing workflow to a new level. The seamless integration of online services like ArcGIS Online or AutoCAD WS service into Penmap makes creating the final drawing and delivery to your customers a breeze. Simply by a button click on Penmap in the field the surveyor can share the survey instantly with the office team or customers. They can use virtually any platform (iPhone, iPad, Mac or any Web-Browser) to review, edit, comment and print the survey. This service is free, without requiring specific "Access" software or subscription.
