

# PHOTOMOD GeoMosaic Now Available

Racurs (Russia) has announced that the new stand-alone program PHOTOMOD GeoMosaic is now available.

PHOTOMOD GeoMosaic is intended for working with various types of digital images, including aerial and space imagery as well as digitised raster maps.

The program functionality a.o. includes:

- georeferencing of raster images
- transforming images from one coordinate system to another
- creating mosaics from georeferenced images of various formats
- photometric correction of source images for mosaic creation
- automatic or manual creation of ROIs
- splitting created mosaic into specified sheets (including standard sheets)
- specifying custom printing scale.

Also announced is the availability of the new version 3.8 of PHOTOMOD. The most noticeable feature introduced in the new version is working with georeferenced raster maps in AT and StereoDraw modules.
