

# PlanetObserver Presents New PlanetSAT Updates Imagery Basemap of USA and Mexico

The French company PlanetObserver, specialised in geospatial data production, has just finalised the new [PlanetSAT Updates imagery basemap of the United States and Mexico](#). Processed with fresh and cloudless Landsat 8 source data, this new basemap covers more than 10 million square kilometres at 15-metre resolution. With an advanced natural colour imagery processing, this high-quality mapping product provides up-to-date and detailed geographic information, perfect for 1:50,000 scale mapping.

Key user benefits of the new PlanetSAT Updates basemap are:

- Up-to-date and reliable geographic information data, available immediately,
- Plug-and-play product, ready-to-use in all professional applications,
- Flexible licensing and pricing models.

PlanetSAT Updates basemap is a unique backdrop solution that brings strong added value to many commercial and military applications, ranging from flight simulation, geo-intelligence and mission preparation solutions, geographic information systems, to mapping applications such as web-based mapping solutions.

The production of PlanetSAT Updates basemap of the United States and Mexico is part of a comprehensive annual maintenance program set up by PlanetObserver in 2016. All new PlanetSAT Updates productions are merged into [PlanetSAT Global imagery basemap](#). Users benefit from constantly refreshed data, perfect to develop new applications and efficient services serving a wide variety of markets.
