

# Plowman Craven Invests in Imaging Total Stations

Plowman Craven, UK, has strengthened its position at the forefront of the survey industry through investment in the latest Leica Viva TS15 imaging total stations and Leica CS15 controllers from Leica Geosystems.

In addition to its recent purchase of an HDS7000 laser scanner, this equipment forms part of the organisation's rolling programme of investment and ongoing commitment to new technology and innovation.

The TS15 total stations provide one-person operation with improved PowerSearch and target tracking. They provide the functionality to overlay survey data on a real-time video feed and, utilising the clarity of a full VGA screen, allow the operator to upload and work

directly from CAD drawings on site. An in-built 5-megapixel camera also allows for images to be stored at each point, and improved productivity gains are obtained via the new SmartWorx Viva interface.
