

Position Partners Signs FARO Distribution Agreement

Position Partners has signed a distribution agreement with FARO Technologies to distribute its FARO laser scanner Focus3D in Australia. Position Partners will promote the laser scanners to its core markets â€” surveying, civil construction and mining.

The addition of FARO products to Position Partners' product offering means greater choice for customers when it comes to their scanning equipment needs, said Heath Low, national product manager for scanning systems at Position Partners. Furthermore, it enables Position Partners to reach into new markets including heritage, architecture and manufacturing.

The Focus3D is a high-speed 3D laser scanner designed for detailed measurement and documentation. Using laser technology, the Focus3D produces highly detailed three-dimensional images of complex environments and geometries in just a few minutes.

Suitable for a wide range of applications and both indoor and outdoor use, the Focus3D can be used to document as-built conditions, visualise design modifications and create 3D surface models.
