

Publisher for ArcGIS v6

TerraGo Technologiesâ€™ Publisher for ArcGIS v6 software is now available. This version of TerraGo geospatial collaboration software allows the Esri community to produce TerraGo GeoPDF maps and imagery for users to collaborate without the need for sophisticated GIS tools or training. The software provides collaboration capabilities by enabling Esri users to extend, exchange and exploit their enterprise geospatial assets by producing portable, intelligent and interactive TerraGo GeoPDF maps and imagery.

Mobile and field workers can use GeoPDF maps and imagery to easily access, update and share mission-critical geospatial intelligence whether in connected or offline environments.

Version 6 Publisher for ArcGIS provides advanced GeoPDF map and imagery production and collaboration capabilities that allow users to produce GeoPDF applications that are automatically enabled to allow anyone, anywhere using the no-cost v6 TerraGo Toolbar with Adobe Reader to update and share maps and imagery with georeferenced audio, video, notes, geoforms, and Web services, support automated GeoPDF map production using Esri data-driven pages, and to export feature layers and attributes into TerraGo GeoPDF maps to allow markup and editing in TerraGo Toolbar and Adobe Reader.
