

Racurs Releases Photomod 4.3

Racurs (Russia) has informed that the new version Photomod 4.3 software is available. The software version 4.3 includes the following features:

- complete ADS40 support - tested on first "alive" production projects
- featuring filters and "Ä±urves" tools for radiometric preprocessing
- new bundle adjustment algorithm
- importing exterior orientation parameters from the text file of user-defined format
- block layout by projection centers only (in case of no exterior orientation angles)
- new fast algorithm of building a TIN with the convex hull and others.

The company also has announced the availability of the new version 4.3 of Photomod GeoMosaic. The most noticeable features introduced in the new version are support of images formats and modern sensors metadata (QuickBird, Ikonos, Spot, Aster, CartoSat, Formosat, etc.), set of tools for images radiometric correction, various algorithms of pan-sharpening processing.

Detailed information about new features of version 4.3 and opportunity to download updates are to be found at the website.
