

Real Time Monitoring Data Via Internet

Leica GeoMoS Web is a web-based service for visualisation and analysis of monitoring via internet. Each authorized user, including customers and partners, can access the monitoring project anywhere and anytime - just using a web browser, PDA or mobile phone. The supplier introduces an evaluation licence to get familiar with the service.

Leica GeoMoS monitoring systems work 24/7, delivering precise data information in critical situations, guaranteeing the safety of both people and infrastructure. Webcams and web images are supported allowing the quick analysis of site conditions. Timeline, scatter and vector graphs provide quick deformation analysis. The graphs and views that are presented are customizable and can be tailored to the needs of each project.

Leica Geosystems is pleased to announce a 30 day free trial of Leica GeoMoS Web. The evaluation license is available to all existing and new GeoMoS users. It allows free access to this successful tool for 30 days. During this trial period users will also benefit from the dedicated Leica Geosystems monitoring support team. After a successful trial period the customer can purchase the service.
