

RolleiMetric AIC Pro-Version

RolleiMetric (Germany) has released the AIC Pro-Version as a new enhancement to the AIC xN digital aerial camera series. The AIC Pro-Version uses the new Professional lenses which are optimised for digital sensors. The AIC Pro-Version is an alternative to the existing AIC product line using PQS lenses.

For the AIC Pro-Version, interchangeable metric lenses with focal lengths of 35, 47, 60 and 72 mm are available for RGB and (C)IR. The direct driven electronic shutter has been optimised for aerial photogrammetry. The AIC Pro-Version can be interfaced to most

FMS, GPS and IMU systems on the market and it can also be combined with various LIDAR systems. With the changes introduced by the new lenses, the weight and dimensions of this camera system have been reduced. RolleiMetric is offering an upgrade from the existing line to the AIC Pro-Version for all customers with the AIC version fitted with PQS lenses.
