

RRS 3D Laser Mapping Distributor

3D Laser Mapping Ltd (UK) has appointed Reutech Radar Systems (Pty) Ltd (RRS) as exclusive distributor for 3D Laser Mapping's long range 3D laser scanning and slope monitoring systems in South Africa and the SADC region.

In the Southern Africa mining sector, both [RRS](#) and [3D Laser Mapping](#) are suppliers to Anglo American. 3D Laser Mapping's slope monitoring system, SiteMonitor, which connects to a Reigl 3D laser scanner, is in use at a major Platinum mine. Other systems to be supplied by RRS include 3D Laser Mapping's Rapid Mapping System for mapping and measuring open pit volumes. RRS has also developed Movement and Surveying Radar (MSR), a radar system designed to operate in harsh mining environments that provides real-time detection of slope instabilities.

Reutech Radar Systems (Pty) Ltd is a joint venture between JSE-listed Reunert Limited, European Aeronautic Defence and Space Company (EADS) and Kgorong Investment Holdings (Pty) Ltd, RRS' black economic empowerment partner. Reutech Radar Systems (Pty) Ltd was founded in 1987 as a division of ESD, which was formed in the early 1980's through an amalgamation of Barlows Electronic Systems and Marconi South Africa.
