

SAIC Landsat Imagery Available via GSA Schedule

SAIC's full line of Landsat value-added products is now available under pre-negotiated, streamlined US General Services Administration (GSA) contract terms, making it quick and easy for most federal, state and local government agencies to search, purchase, and download custom Landsat imagery they need.

Government scientists and geospatial professionals have a one-stop shop for value-added imagery. SAIC's Landsat ImagePlace makes it easy to produce highly accurate research and applications involving multiple scenes spanning a particular geographic area or reaching through time. It offers users more advanced levels of calibration, correction, and processing options than available from the government sector including an automated option for surface reflectance products.
