

Sanborn Awarded Major USGS Mapping Contract

The Sanborn Map Company has been selected by the U.S. Geological Survey (USGS) for a multiple-award indefinite-delivery contract with an upper limit of USD850 million. The Geospatial Product and Services Contract (GPSC 4) is a successor to the GPSC 3 contract that Sanborn was previously awarded. The contract allows the agency to negotiate task orders with Sanborn for the next five years.

The USGS's GPSC is a suite of contracts used by federal, state and municipal governments, as well as non-profits, tribes and private entities partnering with the USGS to fulfil their geospatial data requirements. The USGS has already accomplished the burden of negotiating terms and conditions along with other contractual elements, providing USGS partners with expedited procurement, prequalified vendors, and technical

support to enable one-stop shopping for the professional geospatial services they require.

Geospatial data for a wide range of applications

Thanks to this contract, clients can access Sanborn's state-of-the-art topographic surveys, hydrographic/bathymetric surveys, geophysical surveys, remote sensing and other related geospatial technologies. [Sanborn](#) specializes in integrating these technologies to support a wide range of environmental and infrastructure-related use cases including energy/renewable energy exploration and dissemination, infrastructure monitoring and engineering, floodplain management, landslide mitigation, precision agriculture, water resource conservation, erosion/coastal management, natural resource planning, emergency response and national security.

Sanborn, a preeminent innovator in the geospatial industry, has supported USGS mapping initiatives for over 25 years. "Only a handful of firms are awarded a GPSC contract," commented Jason Caldwell, vice president of business development and sales at Sanborn. "We are honoured that the [USGS](#) selected Sanborn to provide professional services under this multi-year agreement that is an AE qualification-based award."
