

SatLab Dealer Meeting in Czech Republic

On 17 and 18 January, SatLab organised its first Technical Dealer meeting in JičÅn, Czech Republic. The Sweden-based satellite positioning solutions company was somewhat unlucky with the weather, since snowy conditions caused some dealers to miss the event. Nevertheless, dealers from six countries were present in JičÅn.

The main ingredients were technical training sessions on the SatLab SL500 System, SL50 and SL55 Controllers. Also the integration with Carlson SurCE was discussed as SatLab had Carlson Software representative Tomáš Blaha participating. The SatLab SL500 System has a very tight integration with Carlson SurvCE surveying software so it was very good to have the expertise at hand. Another highlight was the presentation of the SatLab 2013 Roadmap of new products as well as a SatLab suite of Software Tools to make life

easier for users of SatLab family of products.

SatLab now has distribution in 13 countries and growing, with Eastern Europe and Turkey/Middle East regarded as its prime markets. The company will bring to market some highly interesting and innovative new products during 2013.
