

Seismic Processing & Imaging Centre

CGGVeritas has inaugurated a new open Processing & Imaging center in Muscat, Oman at a ceremony attended by clients and a delegation from the Omani Ministry of Oil & Gas. The new centre complements the company's activity in the country and offers clients access to the latest processing and imaging technology and services.

Tailored to address the geologic challenges of the region, services are focused on the CGGVeritas 3D land seismic portfolio, including ultra high-resolution wide-azimuth technologies.

The centre also operates as a CGGVeritas University training centre, developing and delivering training initiatives with the Sultan Qaboos University, the Omani Ministry of Oil & Gas and international training organisations.

Colin Murdoch, Executive Vice President, Processing, Imaging & Reservoir, CGGVeritas, said: "With over thirty-five years of experience in Oman, CGGVeritas has considerable knowledge of the region's E&P challenges. Our new centre will provide training and services of the highest standard, customised to help our clients maximise the return on investment they are currently making in very high-channel-count exploration and reservoir optimisation programs."
