

# Septentrio Signs New Partnership with Innovelec

Septentrio has announced a partnership with [Innovelec](#) as an authorised partner for GNSS positioning solutions in the United Kingdom and Europe. This new partnership enables Septentrio's products such as [AsteRx-m UAS](#) to meet the needs of unmanned aerial system (UAS) customers in the European market.

Based in Hemel Hempstead in Hertfordshire, UK, [Innovelec](#) will work directly with Septentrio to offer high-quality strategic services and technical expertise necessary to meet the current and future requirements of GNSS customers in the UK and UAS customers across Europe to develop new business opportunities in the market.

## Accuracy

Since last year, Septentrio has introduced a new set of products which are aimed to achieve a new benchmark for accuracy and reliability in GNSS solutions. Innovelec will supply the AsteRx product line – developed for providing consistent and robust cm-level positioning under challenging interference and multipath environments. The [AsteRx-m UAS](#) OEM is a compact and lightweight module which offers one of the lowest power consumption on the market at 600mW. While the [AsteRx4](#) is a robust dual antenna receiver ready for rapid and straightforward integration into your existing workflows or hardware.

Martin Newman, sales director of Innovelec stated that Septentrio presents an exciting opportunity for Innovelec to further develop its significant business within the GNSS market. Flexibility and support in conjunction with their partners have helped Innovelec to grow and it remains a benchmark of their operations.
