

Software Update OpenLM for ArcGIS

OpenLM has launched version 1.3.0 of OpenLM for ESRI ArcGIS floating license users. The software is available for download and evaluation at the OpenLM web site.

OpenLM for ESRI ArcGIS family of products: ArcView, ArcEditor and ArcInfo, offers a improvement in the availability of software license for the end users and has a significant influence on users productivity.

The new management interface EasyAdmin, for Macrovision FLEXnet (Globetrotter FLEXlm) floating licenses, allow the system administrator to access and manage the license server from any workstation on the network and even outside it. On this first version OpenLM EasyAdmin allow the management of floating licenses and users. Future versions will include a lot of additional functionality and important tools for the system manager.

The OpenLM Light system (free version) is not as powerful as the original software, but nevertheless it is a very strong system with the ability to dramatically improve the life of any system manager. If you are working on a shoestring budget and are prevented from buying the original OpenLM Full system, the Light version is perfect for you.

The main focus of version 1.3.0 is on the EasyAdmin interface for the use of system administrators, and the launch of the new OpenLM Light version. Additionally, several problems which were identified at the 1.2 version were resolved, offering improved interface for users as well as overall enhancement of the system.
