

Sokkia Qualifies for French GPS Network Teria

Sokkia's GSR2700 IS has been qualified for the new French GPS Reference Network Teria. Every surveyor with Sokkia equipment can now use this network. The most important advantage is that measuring can be more accurate with a connection to the Teria network. Surveyors don't have only to depend on a base station. One receiver will meet all requirements. Teria was founded in 2005 and has grown out to be an extensive network of GPS reference stations in France. Teria is part of the Axagone Holding in France.
