Sokkia Topcon Updates

GSR2700 ISX firmware V3.500/2.120 and the GSR Family Config Tool V8.4.2 for the Allegro CX data collector have been released by Sokkia Topcon. GSR2700 ISX firmware V3.500/2.120 update features improved network RTK support for third-party reference networks and advanced ambiguity resolution under multipath. It also provides additional languages for audible notifications, now including Dutch, German, Hungarian, Italian, Lithuanian, Portuguese and Russian.

SOKKIA's GSR2700 ISX is a rugged, high-performance multi-frequency receiver that provides GPS and GLONASS satellite tracking capabilities to maximize surveying accuracy. The GSR2700 ISX, the leading multi-frequency GNSS receiver in the industry, features RTK network support, multiple Bluetooth connections and support for GPS L2C and L5 signals. The cable-free, easy to set up system provides effortless operation in both base and rover modes. The receiver also offers audible status notification in the field. Originally with nine languages, the GSR2700 ISX now supports 16 languages and tones.

The GSR Family Config Tool V8.4.2 update now offers increased support for the GSR1700 CSX, enables use/upload of different user applications for the GSR2700 ISX and includes embedded help in the application. SOKKIA's Config Tool software program enables users to customize operational settings on GSR Family receivers via the Allegro CX data collector.
