

# Spanish Army Selects Intergraph for Digital Map Production

Centro Geográfico del Ejército de Tierra (Spanish Army) has selected and implemented Intergraph geospatial technology to create a completely digital end-to-end production workflow for processing and finishing paper maps. The digital production environment saves the Spanish Army time, reduces costs and produces high-quality maps.

Using Intergraph technology, the Spanish Army is standardising operator training by consolidating knowledge of various products into one intuitive, user-friendly environment. The highly productive mapping workflow allows for easy customisation, including secure attribution capture and population, as well as simplified maintenance tasks. In addition, users may publish maps directly into Adobe Acrobat PDF format reducing time-consuming conversion steps.
