

Special Edition of GIM International on UAS

In recognition of the growing importance of UAS in the geomatics sector, GIM International has been publishing a series of articles on the use of UAS in geomatics over the past few months. Since these articles have proved extremely popular with our readers, we have decided to publish an extra issue of GIM International dedicated to UAS.

Sponsorship opportunities:

We will be publishing a special UAS-themed edition of *GIM International* including at least 5 high-profile articles on UAS. This issue will be distributed at shows such as AUUSI's Unmanned Systems 2013, [UAV-g](#), [Intergeo](#), etc. In addition to the widespread distribution of the printed version, we will also publish a digital version, which will be sent to our e-newsletter subscribers and

made available on the *GIM International* website at no cost.

Please [contact us](#) to learn more about the circulation of this publication and the various sponsorship packages on offer.

See [our website](#) for more articles on UAS.
