

Supergeo and FOIF Join Forces to Deliver GIS Solution

Supergeo Technologies, a GIS software and solution provider, has announced a cooperation agreement with Suzhou FOIF Co. (FOIF) to provide worldwide surveyors with a high-accuracy GIS turnkey solution.

Mobile GIS is the base to establish GIS infrastructure with field data, and data accuracy determines the quality and subsequent processing time and cost. However, traditional survey instruments or post-processing usually cost a lot.

With more than 50 years of experience in geo-related surveying equipment manufacturing, FOIF supplies gyroscope stations, total stations, theodolites, laser products, GNSS, etc. By collaborating with FOIF, Supergeo is able to provide users around the world with a

complete GIS solution:

- Field Controller: F52 and F55 Series Handheld devices
- Field Software: FOIF SuperGIS (with complete mobile GIS functions, plus NTRIP real time correction solution)
- Office Software: FOIF SuperGIS-Desk
