

# Supergeo to Release SuperGIS Desktop 3.2

Supergeo Technologies, the provider of complete GIS software and solutions, has stated that SuperGIS Desktop 3.2, the desktop GIS software, will be released in Q4 2013, to offer more comprehensive map analysis, editing and management functions. Featuring abundant GIS tools, the 3.2 edition provides GIS users from various domains with a professional platform to geoprocess, analyse, display, edit, manage and query a massive amount of GIS data faster and more easily.

In addition to improving map analysis, editing and management functions, the desktop GIS software supports Multiple Map Frame, which allows users to effectively and simultaneously process and analyse spatial data in different extents.

SuperGIS Desktop 3.2 offers advanced editing tools such as Auto Intersection and Split Proportionally to assist mappers in flexibly editing maps. Besides, a georeferencing tool and an OGC add-on are also built into SuperGIS Desktop 3.2 to fulfil users' requirements for data and image manipulation.
