SuperSurv for iOS V0.99 Available on App Store

Supergeo Technologies, the global provider of complete GIS software and solutions, announced that the free trial of SuperSurv for iOS V0.99, the mobile GIS software, is now available on the App Store. Integrating with GIS and GPS technologies to provide functions like map display, query, measure, etc, and support field data collection. SuperSurv, the mobile GIS application, is released for iOS users to complete efficient field survey.

With Online Map Tool, SuperSurv for iOS V0.99 allows users to apply OpenStreetMap as basemaps to capture point, line, and polygon features and attribute data, as well as save the collected data in SHP format. Consequently, the collected layers can be exported through iTunes and be deployed in various GIS programs.

The official version of SuperSurv for iOS will be released in early 2014, which support a variety of GIS functions such as waypoint, GPS track, measure function, query, and connection with SuperGIS Server services for data synchronisation.
