

SurveyMaster Lite

Topcon Positioning Systems (TPS) has released a new CAD-based desktop application for surveying and job site information editing and plotting – SurveyMaster Lite. This application is created as a cost-efficient surveying office software package perfect for the cadastral surveying and construction stakeout professional.

Modeled from Topcon's SurveyMaster software program, SurveyMaster Lite is loaded with survey specific functionality as well as surface modeling and contouring tools. SurveyMaster Lite provides tools required to produce final plats and survey calculations for property surveys, topographic maps and ALTA surveys.

SurveyMaster Lite is designed so users can manage data from raw format all the way through to a finished plot. Survey calculations can be completed and uploaded to the field collector for stakeout and field verification.

Contino said, "SurveyMaster Lite is the perfect addition to complete any Topcon instrument system. It completes the cycle of a 'field-to-finish' solution. The program is on the USB Drive so users can simply take the USB Drive with them and have the program on any PC."

Features include:

- Complete desktop surveying and drafting solution;
- Versatile 'field-to-finish' solution with automatic line connectivity;
- Synchronization with TopSURV & Pocket 3D;
- Program is transportable - USB key;
- Easy, uncomplicated plotting;
- Interactive raw data editor;
- Customizable data entry/editors;
- Traverse adjustments;
- Network least squares adjustment;
- Least squares transformation;
- Subdivision layout;
- Legal description writer;
- Contouring and surface file editing;
- User-defined symbols;
- User-defined linetypes;
- User-defined title blocks; and
- Stand-alone performance.
