

Tele Atlas MultiNet Global Digital Map Database

Tele Atlas (CA, USA) has unveiled Tele Atlas MultiNet 2006.10, the next generation of its MultiNet global digital map database. This latest version of the company's development platform for navigation and location based applications encompasses a complete street network vector database covering major and interconnecting roads, local streets and 650 million addresses in 51 countries. MultiNet 2006.10 also features a most accurate digital map of North America.

MultiNet is the global data and content foundation for many of the world's leading consumer and enterprise mapping solutions, including millions of in- car navigation systems and portable navigation devices, PDAs and mobile phones. Developed with the most comprehensive and advanced processes for anticipating and detecting real world change, MultiNet contains data from more than 50,000 authoritative resources, including Tele Atlas' patented Mobile Mapping Van technology.
