

# Teledyne Optech Opens New Service Centre in Europe

Teledyne Optech is launching a new customer service centre dedicated to the service of equipment for its European clients. Teledyne Optech is a Teledyne Technologies company and a leader in advanced Lidar sensors.

Located in the Netherlands, the new service centre will be a European hub for clients to have their airborne, mobile and static 3D sensors serviced augmenting its existing in-field service and providing quick turnaround on repairs.

“We are proud of our customers and inspired by the work they do with our sensors and we are equally invested in their success. It is exciting for us to expand our world-class customer service by providing a local service center for our European clients,” said Michel

Stanier, executive vice-president and general manager of [Teledyne Optech](https://www.teledyneoptech.com).

The new service centre will support more than a hundred clients in Europe and the Middle East and will provide repairs and replacement parts with quick turnaround time and plans to include a full-time service manager and loaner pool.
