

TerraGo Partners with Beijing Space View Technology

TerraGo, a leading provider of geospatial collaboration software, has signed a partnership with Beijing Space View Technology to help meet growing demand in China and better serve customers in that region. The Chinese company has officially joined the TerraGo Advantage partner programme as a top-tier Platinum Partner, and is a leading geographic information provider developing various geoinformation products, services and solutions based on high-resolution Earth observation satellite data.

According to Lily Xu, president of Beijing Space View Technology, TerraGo products provide simple and easy sharing of GIS data for those who are GIS and non-GIS professionals alike. This technology offers new solutions for field workers who specialise in disaster monitoring, pollution sourcing and natural resource management, amongst other industries. Xu added that China is investing heavily in geospatial technology. By teaming with TerraGo, the company will be able to provide more solutions and optimised service for Chinese customers.

Beijing Space View Technology is the premier geospatial technology provider in China and the right partner to help support the adoption of TerraGo products throughout the region, commented David Gura, senior partner manager at TerraGo. Beijing Space View Technology is recognised for its hands-on approach and deep understanding of the diverse needs of Chinese customers. It will be a valuable partner to meet Chinese government and commercial market needs and foster TerraGo's continued global growth, he added.

With a strategic group of partners, including leading systems integrators and software providers, and more than 1,200 global customers, including thought leaders in defence and intelligence, crisis response, transportation and natural resources, TerraGo aims to provide organisations with solutions to discover, integrate and deliver location intelligence to the edge of the enterprise and back.
