TerraGo Technologies Partners Autodesk

TerraGo Technologies (GA, USA) has partnered with Autodesk as an Independent Software Vendor (ISV). TerraGo Technologies will offer Map2PDF, the software used to create GeoPDF files, for AutoCAD Map 3D customers.

TerraGo Technologies solutions are designed to enhance the business of Autodesk and TerraGo Technologies' mutual customers by making geospatial data readily available in a format almost everyone already knows how to use.

TerraGo Technologies pioneered the GeoPDF format, the only geospatial data distribution and collaboration platform that leverages the Adobe Portable Document Format (PDF). Map2PDF allows customers to publish and collaborate on GeoPDF files, which contain robust cartographic data and mapping capabilities including layers and embedded feature attributes. The GeoPDF Toolbar gives users access to detailed digital maps in Adobe Reader, a lightweight, flexible interface most people already know how to use.

AutoCAD Map3D users will be able to create robust map books in GeoPDF format for distribution to field workers, first responders, planners, contractors and other constituents who use maps. Map2PDF for AutoCAD Map 3D will be available in Quarter 1 2008.
