

Terrasolid European Users Event 2014

Terrasolid, the Finnish developer of Lidar and image data processing software products, is inviting its product users to attend the company's annual Users Event. Besides the high-level training sessions, the event will also be a platform for meeting and discussing with other Terrasolid users. The event is being held from 3 to 6 February 2014 in Levi, Finland.

The training is hands-on training and attendees should have their own computers (preferably laptops) with them.

Terrasolid will provide the installation files and licenses for Terrasolid applications. If necessary, Terrasolid can also provide MicroStation installation files but the company

does not distribute licenses for Bentley products. Some of the advanced training sessions will use the 64-bit version of MicroStation which is provided by Terrasolid as well.

Training Agenda

The preliminary training agenda can be downloaded [here](#) as a PDF. The final time schedule will be published closer to the event.

The training is divided into up to five parallel sessions with different training topics. Participants are free to attend topics from different sessions. On Wednesday morning, 5 February, there are presentations about new features in Terrasolid Applications.

Please click on the topics in the following table for more information on the training content. The colours in the table are indicating the experience level with MicroStation and Terrasolid software that is recommended for attending the training courses.
