Topcon Announces TopSURV 5.04

Topcon (CA, USA) has announced the release of TopSURV version 5.04. This new version of Topcon's field controller software has many new features that provide extended functionality.

TopSURV's modular components give the user flexibility to customise applications to suit specific needs. The Basic module provides routines for tasks performed in the course of normal land surveying. Roading, GPS+, Robotic, and GIS modules can be added to tailor TopSURV to the diverse needs of survey, GIS, and construction professionals.

TopSURV's recent validation for conformance to LandXML standards enhances file compatibility. Other new features include:

- import, display, and edit linework from DXF / DWG / Shape / ASCII formats files.
- import GEOTIFF graphic files for use a background maps
- supports laser technology rangefiners
- includes new Roading module features
- perform stakeout directly from the main menu.

Topcon Tools 5.04 , companion software for the office, has also been updated to offer the same new features as TopSURV.
