

Topcon Releases GMS-110

An integrated GIS data collection and land survey system, named GMS-110, has been introduced by Topcon Positioning Systems (CA, USA). The GMS-110 is designed to work with Topcon's FC-100 field computer, featuring a colour touch screen and Windows CE operating system. Both TopPAD and TopSURV-GIS applications can be loaded on the FC-100, empowering the user with ultimate flexibility in the field. Other field data controllers can also be used with the system.

This compact instrument incorporates all of the primary position correction services – Coast Guard Beacon, WAAS, EGNOS, and OmniSTAR-VBS. Internal lithiumion batteries power the unit for 14 hours for the long work days. Topcon's integrated system design and Bluetooth wireless technology eliminate external cables and components, making the GMS-110 a versatile, easily portable backpack GIS solution.
