

Topcon Total Station Tender

Topcon (Netherlands) wins the world's largest total station tender. With more than 800 instruments to be delivered to the Polish Ministry of Education (MEN) by Polish partner TPI, Topcon has set a new world wide record for the largest tender ever with its technology.

The tender breaks down to 430 Total Stations (GPT-3107N) and 430 optical levels (AT-G6); making for a total of 860 instruments. The equipment will be used for educational purposes in all Polish secondary technical schools that require surveying instruments in their educational processes. The agreement is the result of a tender organized by MEN between November 2007 and March 2008.
