

Topographic Database Upgrade Project

Dubai Municipality has awarded the project for updating its digital topographic database to a consortium of four companies. Genesys International Corporation Limited, India, will carry out aerial triangulation, compilation of DEM, digital true-orthophoto processing, as well as project management. New Zealand Aerial Mapping (NZAM) will execute aerial photography

Signalisation of control points in the flying phase, ground control survey in the aerial triangulation phase and all jobs pertaining to field verification will be carried out by ARD Geographics. Innovations Map Services will provide the on-site mapping teams with local logistic support.
