

# Trimble Dimensions Cancelled, Esri User Conference Goes Virtual

Trimble has announced the cancellation of the 2020 edition of its annual Trimble Dimensions event. Due to the uncertainty regarding the coronavirus, the geospatial powerhouse has made the decision not to hold the event this year.

Dimensions is the signature event for Trimble's global user community spanning agriculture, construction, geospatial, transportation, utilities and more. "Unfortunately, the overwhelming concerns and ongoing impact of COVID-19 inhibit our ability to deliver a conference that meets the high standards of safety and excellence our attendees expect and deserve," the company declares in a statement.

## Virtual Esri User Conference

Esri, the world's largest mapping and GIS organization announced that its Annual User Conference, normally held in San Diego, California, will move to a completely virtual format. This event will take place 13–15 July 2020.

"While not being together with our users and partners is a great disappointment to me personally, we are working hard to create an amazing event that will continue to move our community forward," said Jack Dangermond, Esri president. "I have watched the Esri UC grow, evolve and improve, and I know this year will be no exception. My sense is that this experience will help us all learn even more about what makes our community so special."

Registration for the [virtual Esri UC](#) is complimentary for all Esri users. The virtual format will enable these users to allow an unlimited number of attendees from across their organizations to participate.
