

Trimble/Panasonic Computer Solutions Company

Trimble and Panasonic Computer Solutions Company, manufacturer of Panasonic Toughbook mobile computers, have announced that they will provide utilities with a bundled offering specifically for utility field workers. The combination of the reliable Toughbook notebooks and Trimble GPS Pathfinder ProXT and ProXH Global Positioning System (GPS) receivers is an ideal asset management solution for mapping, Geographic Information System (GIS) and CAD applications.

Mobile workforces locating buried assets, mapping telecom and broadband assets or managing pipeline integrity can rely on the fully-rugged Panasonic Toughbook laptops and Trimble's GPS Pathfinder ProXT and ProXH receivers to provide reliable positioning and asset feature information in the field. The fully-rugged Toughbook laptops offer maximum uptime in the field, withstand virtually any environmental challenges, accidental knocks and spills. Trimble's GPS receivers wirelessly link to notebooks through a Bluetooth connection. Compact, rugged, reliable and wireless, Panasonic and Trimble together offer an easy-to-use-and-set-up solution, which eliminates cables and tangles, allowing workers to move around the jobsite freely.

The utility field worker bundle is available now through authorized Panasonic and Trimble Mapping and GIS dealers.
