

TruBlu Module Provides Wireless Connectivity

NavCom Technology, Inc. (CA, USA) has announced the introduction of TruBlu, a Bluetooth compatible wireless device, enabling cable- free communication between NavCom's GPS receivers and Bluetooth enabled controllers.

TruBlu is a wireless transceiver that works with all NavCom GPS receivers equipped with the latest 26 channel NCT-2100D GPS engine. The compact module provides a wireless range of up to 30 metres and is powered directly from the GPS unit, requiring no additional batteries for usage. The embedded blue LED illuminates the translucent and water resistant casing, flashing intermittently to indicate proper operation.

The TruBlu wireless module is priced at US\$395 per unit and is currently available for shipping.
