

# UltraCamLp for Kisik Aerial Survey

Kisik Aerial Survey has purchased an Vexcel Imaging UltraCamLp medium-format camera system.

"We selected the UltraCamLp camera based on the size of its footprint versus the cost of the sensor," commented Mr. Bill Lakeland, General Manager of Kisik Aerial Survey Inc. "We also feel that Vexcel Imaging is the vendor that we want to work with on a long-term basis as our company grows and requires additional support and resources."

"The UltraCamLp camera is a great fit for the projects that Kisik Aerial Survey is expecting to complete in British Columbia," said Alexander Wiechert, Business Director of Microsoft and Managing Director for Vexcel Imaging GmbH. "We are pleased that management chose the UltraCamLp to launch the firm in the digital aerial data acquisition market."

The UltraCamLp is a camera system addressing the medium-format market with large-format image quality and efficiency; it is also suitable for smaller aircraft and projects requiring a rapid response. The camera provides the same high geometric accuracy, broad dynamic range, matching and stereo capabilities, and full metric capabilities as the UltraCamX, UltraCamXp, UltraCamXp Wide Angle large-format cameras.
