

# Universal Addresses onto Desktop

NAC Geographic Products Inc (Canada) has released NAC Google - a Google Desktop gadget that has integrated NAC Enhanced Google Maps, Google Local Search and Google Driving Directions onto one simple user interface, and brings Universal Addresses and Google Maps directly onto your desktop.

Users can immediately get any of these services not only with lat/lon pairs, street addresses, street intersections, POIs and postcodes/ZIPs, but also with Universal Addresses.

Enhanced with the capability of the Universal Addresses, users of NAC Google can directly get the maps including high resolution satellite images, search nearby businesses and obtain turn-by-turn driving directions of any locations in the world whenever they want on their desktop thanks to the efficiency, language independency and geographic complete coverage of the Universal Addresses. For example, you can simply input the short Universal Address: [H5Q2 R48Q](#) to get the map of Eiffel Tower in Paris instantly.
