

V2.2.0 for Leica GPS Spider Software

Leica Geosystems (Switzerland) has introduced the new V2.2.0 for Leica GPS Spider software for GPS reference stations and networks. Leica GPS Spider V2.2.0 contains software optimisations such as further improved data processing for Network RTK.

The software now fully supports the new range of Leica System 1200 GNSS receivers with GPS & Glonass data and also offers Glonass RTK services. Further the graphical user interface has been enhanced with graphical online and offline network processing status with history view, for advanced system performance monitoring and analysis. New output formats and logging capabilities and Glonass data support for the Leica GPS Spider Positioning/Post-Processing expand its capacity for GNSS monitoring applications, where Leica GPS Spider - paired with Leica GNSS QC Coordinate Analysis "is a first choice solution."
