

DynamicLock feature for Leica Geosystems automated total stations

Discover how the DynamicLock feature will enable you to finish your surveying projects faster and take better care of your own safety while working on site. The new functionality will greatly improve the ability of your instrument to lock (detect and then follow) onto a moving prism. DynamicLock is now available as an option for the following Leica Geosystems' automated total stations: Leica Nova MS60, Leica Nova TS60 and Leica TS16.
